

Foam drilling

Approx. amounts of additives in litres or kilograms based on 100 litres make up water

Stable formations – dusting off

MODIFOAM 735	0,5 - 1,0 l
--------------	-------------

Partially disturbed formations

MODIFOAM 735	1,0 - 2,0 l
--------------	-------------

Water bearing formations

MODIFOAM 735	1,0 - 3,0 l
PAC R	0,1 - 0,4 kg
or	
MODIFOAM 735	1,0 - 3,0 l
ARGIPOL NF (liquid)	0,2 - 0,4 l
or	
MODIFOAM 735	1,0 - 3,0 l
ARGIPOL P (powder)	0,05 - 0,2 kg

Intensively disturbed formations

Same as **Water bearing formations**

Note:

- If there are clay or claystone layers it's recommended to use ARGIPOL NF or ARGIPOL P together with MODIFOAM 735.
- When mixing MODIFOAM 735 together with other polymers it's suggested to mix a polymer first and after 20 – 30 minutes MODIFOAM 735 can be added.
